

**CITY OF BRENTWOOD
SELF – CERTIFIED CONSERVATION STANDARD**

Recognizing persistent yet less severe drought conditions throughout California, on May 18, 2016, the State Water Board adopted an emergency water conservation regulation that replaces previous emergency regulation(s). The May 2016 regulation requires locally developed conservation standards based upon each agency’s specific circumstances. It replaces the prior percentage reduction-based water conservation standard with a localized “stress test” approach.

Each water supplier is required to evaluate its supply portfolio and self-certify the accuracy of its information; the State Water Board assigns each supplier a mandatory conservation standard equal to the percentage deficiency the supplier identifies in its supply under certain specified assumptions. See [State Water Resources Control Board \(“SWRCB”\) Resolution No. 2016-0029](#) for the full May 2016 emergency regulation. The new conservation standards take effect in June and remain in effect until the end of January 2017.

To prevent the waste and unreasonable use of water and to meet the requirements of SWRCB Resolution No. 2016-0029, each urban water supplier is required to submit a Certification of Self-Certified Conservation Standard to the SWRCB.

Based on the information and assumptions identified in the SWRCB Resolution No. 2016-0029, the City of Brentwood self-certified on June 17, 2016, a conservation standard of zero percent reduction requirement.

City of Brentwood has supplied the following water data which is contained in the [City of Brentwood 2015 Urban Water Management Plan](#). The total available water supply for City of Brentwood in 2017, 2018 and 2019 is 100 percent of the total supply reported in the Urban Water Management Plan.

Water Year	Water Supply (Million Gallons Year)
2017	6,648
2018	6,648
2019	6,648
