Interest rates across the yield curve fell during the second quarter on fears of an economic slowdown, and as a result, fixed-income portfolios with longer durations posted strong positive returns. With their highest quarterly returns in a year, longer-duration fixed-income portfolios significantly outperformed cash-equivalent portfolios, where returns remained near zero.

Two factors caused the interest rate drop: first, weak economic reports set off fears of slower growth and lowered inflation expectations; second, sovereign debt concerns in Europe sparked a flight-to-quality. By the end of the quarter, yields on Treasury securities had fallen from their 2011 highs, in some maturities, to all-time lows. The significant bond market rally made fixed-income investments one of best performing asset classes in the second quarter.

The Economy

Worries over slowing growth emerged after a series of releases of weak economic data. The final GDP estimate put first quarter growth at 1.9%, below expectations and lower than the 3% to 4% that is typical at this stage in an economic recovery.

After several months of strong job growth, the labor market appeared to slow down as well. Only 22,000 new jobs on average were created during the last two months of the second quarter, compared to 215,000 new jobs on average during the last two months of the first quarter. Manufacturing activity slowed with the ISM manufacturing index falling from 61.2 in March to 55.3 in June, closer to the threshold of 50, which marks the beginning of a contraction in industrial activity.

Although the economic slowdown is troubling, many economists believe it is temporary. The earthquake and tsunami in Japan disrupted supply chains across the world causing repercussions to the global industrial system and affecting U.S. manufacturers who faced shortages of auto and electronics components. Toward the end of the quarter, production levels in Japan rebounded and U.S. companies started to increase production. Other temporary factors were higher

food prices due to the floods in the Midwest and higher oil prices due to the geopolitical tensions in the Middle East and Northern Africa. Higher food and energy prices had a dampening effect on consumer purchasing power and spending. For example, the pace of retail sales, excluding automobiles and gas, slowed in the second quarter to a monthly average of 0.2%, compared to the preceding 3 month average of 1.0%.

Interest Rates and Returns

Treasury yields fell steadily over the quarter with intermediate-term Treasuries showing the most change. As the following table shows, the yield on the 5-year U.S. Treasury Note declined by 52 basis points (0.52%), from 2.28% on March 31, 2011 to 1.76% on June 30, 2011. At the end of June, the yield on the 2-year U.S. Treasury Note reached a new all-time low on speculation that Greece's government would fail to pass austerity measures needed to secure a bailout.

Short-term interest rates, which are anchored to the Federal Funds rate, declined as well. A flight-to-quality, lack of short-term Treasury supply, and quarter-end demand from investors such as banks and securities firms drove the yield on the 3-month Treasury bill to 0.01%, and at some points in June some Treasury bills actually traded at negative yields.

Comparison of U.S. Treasury Yields

Date	3M	6M	1Y	2Y	3Y	5Y	10Y
June 30, 2011	0.01%	0.10%	0.18%	0.46%	0.80%	1.76%	3.16%
March 31, 2011	0.09%	0.17%	0.27%	0.82%	1.30%	2.28%	3.47%
<i>Change over Quarter</i>	-0.08%	-0.07%	-0.09%	-0.36%	-0.50%	-0.52%	-0.31%
June 30, 2010	0.17%	0.22%	0.31%	0.60%	0.96%	1.77%	2.93%
<i>Change over Year</i>	-0.16%	-0.12%	-0.13%	-0.14%	-0.16%	-0.01%	0.23%

Source data: Bloomberg

The sharp decline in interest rates through the quarter is illustrated by performance of the 2-year Treasury note (following chart) which ranged from 0.83% to 0.33%.

2-Year U.S. Treasury Note Yield

July 1, 2010 through June 30, 2011

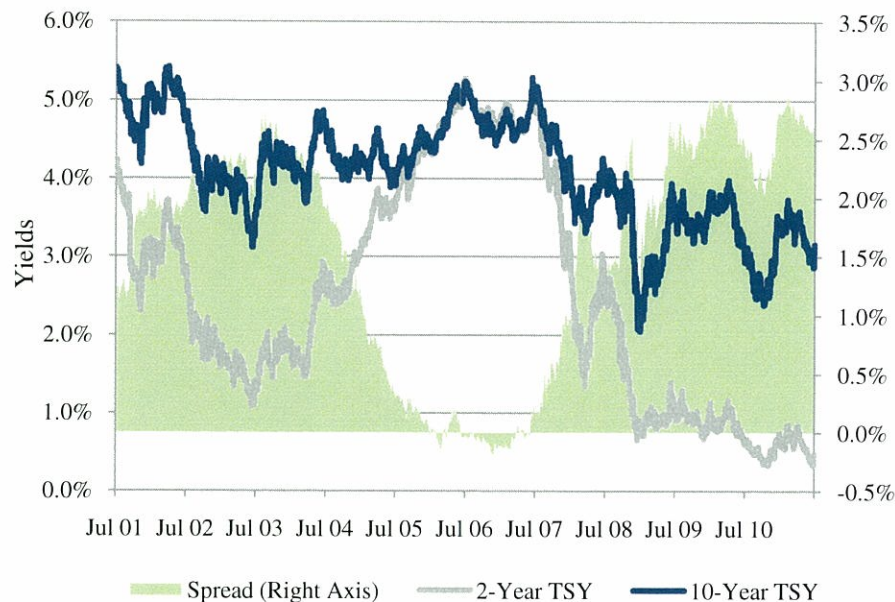

Source data: Bloomberg

Despite low absolute yields, the yield curve remained steep. As seen in the chart on the right, the steepness of the yield curve, measured by the spread between 2-year and 10-year U.S. Treasury notes, was approximately 2.70% by the end of the quarter, very close to its 10-year widest spread. Market observers generally view a steep yield curve as anticipating rising growth and inflation, but in this case, factors such as the flight to quality and the trillions of dollars of excess cash created by the Fed have boosted demand for short maturities.

U.S. Treasury Yields and Yield Curve Steepness

July 1, 2001 to June 30, 2011

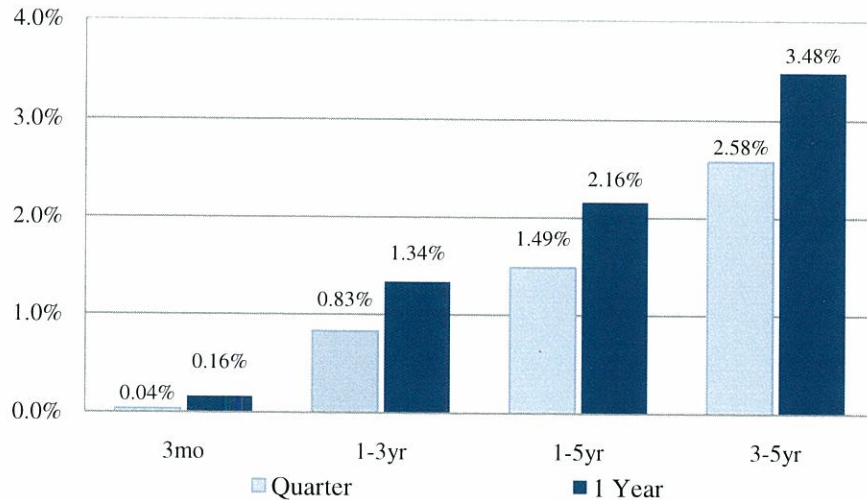

Source data: Bloomberg

Since intermediate and long-term rates fell more than short-term rates, longer-duration strategies outperformed shorter-duration strategies as seen in the following chart. For example, the 3- to 5-year U.S. Treasury index returned 2.58% (10.71% annualized) for the quarter versus a return on the 1- to 3-year U.S. Treasury index of 0.83% (3.36% annualized).

In the current positively sloped yield curve environment, portfolios with less duration than their benchmarks may perform just as well as, if not better than, their benchmarks as securities approaching their maturity dates will “roll-down” the curve and be priced as shorter, lower-yielding securities, increasing their return.

Total Returns of Merrill Lynch U.S. Treasury Indices
Quarterly and 12-Month Total Return as of June 30, 2011

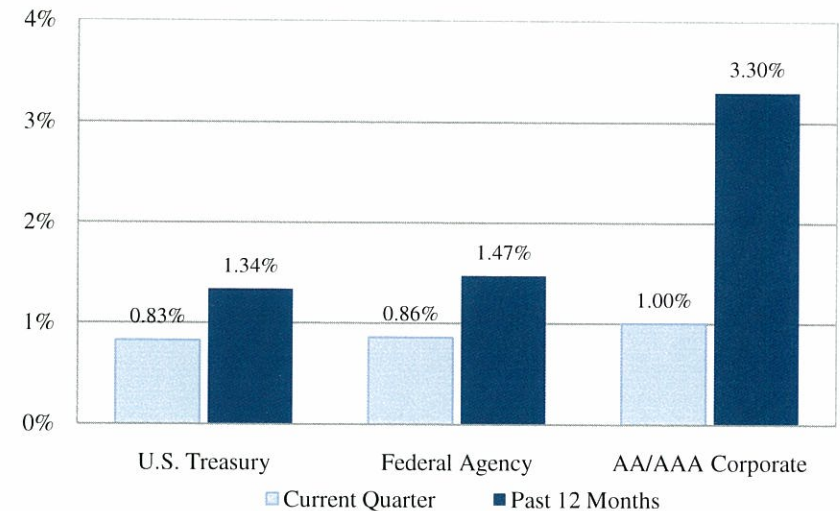

Source data: Bank of America Merrill Lynch; Bloomberg

Performance during the second quarter accounted for most of the return for the trailing 12 months. For example, the total return during the quarter represented more than 74% of the trailing 12-month return on the 3- to 5-year U.S. Treasury Index. Shorter-duration strategies continue to be limited by the extremely low Federal Funds rate and lag the performance of longer-duration strategies. So, for the 12 months ended June 30, 2011, the 3- to 5-year U.S. Treasury index returned 3.48% versus a return of 0.16% on the 3-month index, an outperformance of 332 basis points.

After several quarters of outperforming Treasuries, federal agency and corporate securities barely held their own in the second quarter. On a duration-adjusted basis, agencies and corporates returned 0.86% and 1.00% respectively, while Treasuries returned 0.83% as seen in the chart on the right. In these cases, although credit spreads slightly widened, the additional income for agency and corporate securities was higher and offset the spread widening.

Duration Adjusted Returns of Merrill Lynch 1-3 Year Indices
Quarterly and 12-Month Total Return as of June 30, 2011

Source data: Bank of America Merrill Lynch; Bloomberg

Duration-adjusted return incorporates an adjustment to the market value return (but not the income return) of each benchmark to account for their varied durations, making it easier for investors to assess the relative risk and return of benchmarks of different lengths.

Economic Outlook

The temporary factors that slowed the economy in the second quarter should subside and lead to a rebound in the second half. However, Federal Reserve officials have lowered their growth forecasts for the second time this year from 3.1% to 3.3% in April to 2.7% to 2.9%. The Fed’s latest forecast reflects the obstacles that continue to weigh on the domestic and global economies.

The lack of a rebound in the housing market in the United States is a big reason why the current recovery is stagnant. Banks have imposed tighter underwriting standards for home mortgages and uncertain job prospects have constrained the demand for housing. Meanwhile, with a large supply of vacant and foreclosed properties on the market, potential home buyers can strike deals, making new construction a more costly alternative. As shown on the following chart, the Case Shiller Home Price Index fell 4.2% over the first quarter to \$125.41.

Despite the support for sales seen in 2009 and 2010 due to the first-time home buyers’ tax credit, there has been no recovery or stabilization in home prices. Home prices are down 5.1% compared to their level a year-ago and continue on their downward spiral with no relief in sight.

Case-Shiller Home Price Index
 March 31, 2001 to March 31, 2011

Source data: Bloomberg

Another growth obstacle is the shrinking government sector. State and local governments are cutting spending and government employment is shrinking with a loss of 390,000 government jobs over the past three years. As the stimulus provided by the American Recovery and Reinvestment Act winds down, there is a widening revenue gap for state and local government. Cutbacks in Federal spending—which seem inevitable—may in the long run reduce the Federal deficit and boost the private sector, but in the short run, they will further reduce economic activity and retard the recovery.

Despite these obstacles and the recent economic slowdown, the Federal Reserve believes the recovery is still underway. Though the

pace is slower than desired, the Fed is wary of doing more to bolster growth and a third round of quantitative easing is unlikely.

Investment Strategy

Value is difficult to find in the fixed income markets because interest rates are at or near all-time lows, and the corporate and Federal agency sectors are not particularly attractive, as interest rate spreads have narrowed considerably from recent levels. A stagnant economy, the uncertainty surrounding the sovereign debt situation in both the United States and Europe, and commodity-related pressure on global prices add to the challenge.

Our portfolio strategy is a defensive one: we are positioning portfolios somewhat short of benchmark durations with the expectation that the positively-sloped yield curve will reduce the effect of a sharp rise in interest rates, and the additional value gained by rolling down the curve will compensate for the shorter duration. We plan to take advantage of any widening in spreads to add incremental income by re-allocating assets into Federal Agency or high quality corporate obligations where policies permit, but we will carefully manage interest rate risk to minimize the effects of an inevitable rise in rates.

Portfolio Summary

<u>Total Portfolio Value</u>	<u>June 30, 2011</u>	<u>March 31, 2011</u>
Market Value	\$201,146,458.86	\$187,050,404.94
Amortized Cost	\$199,767,095.14	\$186,538,410.64

PORTFOLIO RECAP

- The portfolio complies with the California Government Code and the City's investment policy.
- Yields began the quarter near one-year highs, then proceeded to fall for 11 straight weeks—the longest such streak in 27 years. By late June, 2-year Treasury note yields retested their all-time low of 0.33%. Yields spiked during the last week of June, but still ended the quarter 30-50 basis points (0.30%-0.50%) lower for maturities between 2 and 10 years.
- Economic data weakened dramatically during the second quarter, including dismal reports on employment, housing and business activity. Many other indicators were weaker than forecast, including factory orders, auto sales and manufacturing purchasing manager surveys. The business disruption from the Japanese earthquake in March continued throughout the quarter, likely depressing GDP growth in the U.S. to just 2.0%. While the market impact due to unrest from the "Arab Spring" seems to have waned, the debt crisis in Greece took center stage. In June, Standard and Poor's lowered Greece's sovereign debt to a CCC rating, the lowest in the world. Prime Minister Papandreou's government won a vote of confidence (barely), and the Greek parliament passed a significant set of austerity measures. The turmoil sent global equity markets reeling and sovereign debt issues across Europe continue to be a major issue and are a source of much market volatility.
- The Federal Reserve reiterated its position to keep short-term rates in their current, near zero range. The Fed completed its \$600 billion "QE2" Treasury purchase program by quarter end, but the liquidity created by those purchases has not yet flowed into creating economic activity. While economists do not expect a "QE3" program, the Fed indicated it plans to keep a high degree of monetary accommodation and will reinvest principal and interest payments from security holdings in its inflated balance sheet back into Treasury securities. Meanwhile, the deadline looms for resolving the debt ceiling issue in the U.S. It is very unclear what the final outcome will be and when it will be resolved.
- Early in the quarter, we maintained the portfolio duration near that of the benchmark. As the quarter progressed and yields plummeted, we allowed the duration to drift shorter, ending the quarter on the conservative side, around 88% of benchmark duration.
- At the beginning of the quarter, agency spreads were narrow, so we held more than the usual amount of Treasury securities. Treasuries generally performed well, appreciating from the "flight-to-quality" bid caused by the European debt crisis. Near quarter end, spreads began to widen, so we swapped from Treasuries to Agencies in some maturities. As we have for some time, we favored "bullet" maturities and avoided securities with early call features. In some cases, we also invested in floating-rate securities, when their yields were favorable compared to shorter-term alternatives.
- We continued to add high-quality corporate issues when they offered good value. In some cases, we purchased new issues which came at attractive yield concessions to outstanding issues. We also focused on issues from various industrial sectors, avoiding adding exposure to banks and financials, which are already well represented in a diversified portfolio. Although yield spreads widened a bit in June, corporate securities performed well for the quarter, and have performed very well over the past year.
- The portfolio continues to provide good long-term performance. Over the past two years, when short-term rates have remained near 0%, the portfolio has had an annualized total return of 2.31%, which exceeds the return on the benchmark by 0.31%.

Portfolio Summary - continued**PORTFOLIO STRATEGY**

- Early in the third quarter, yields began to fall anew on news of a spreading debt crisis in Europe. While Greece was a relatively small player, the crisis has begun to implicate larger economies like Spain and Italy. The prospect for a resolution that does not involve a default or “haircut” for Greek bondholders remain uncertain. If the European crisis worsens, it could damage global economic growth.
- Economic indicators in the U.S. remain disappointing, especially the unemployment rate, which has risen back over 9%. With high unemployment, the Fed can only achieve this half of its dual mandate by keeping rates low for the next year or more. This will likely result in persistently low yields for the foreseeable future. Despite this expectation, the markets could still experience significant yield movements caused by changing economic dynamics, rising inflation expectations, or loss of confidence in U.S. debt. The U.S. must continue to issue large amounts of debt to fund its budget deficit, as even the most aggressive budget cutting proposals back load those measures into future years.
- As we have noted on occasion in the past, with 2-year Treasury note yields under 0.40%, they provide little current yield and very little protection against the negative market value impact of a potential rise in rates—just a 6 basis point yield increase will overwhelm the meager amount of interest earned over the course of the quarter.
- We begin the third quarter on the conservative side, with the portfolio duration around 88% of benchmark duration. With short-term rates near zero and rates in some intermediate maturities near record lows, we believe a conservative stance is warranted for now. Although the steep yield curve provides some legitimate incentive to invest “out the curve,” we remain cautious and will do so very selectively.
- Our strategy will continue to focus on maintaining the safety of the invested principal and achieving the City’s long-term investment objectives. We will maintain a safe, well-diversified, high quality portfolio and continue to evaluate all the sectors available to the City and to capitalize on investment opportunities presented by the market. Our strategy will likely emphasize Treasuries, non-callable federal agency securities, and select high-quality corporates.
